

# How to Mix

**Water Line** —

# Products

- Pour Slush Puppie concentrate to the **5:1 Line** of a clean mixing container
- Fill container with water to the **Water Line**
- Shake mixture **thoroughly**
- Remove top cover of machine

**For 2-Bowl Visual Machines - Pour to MAX FILL Line**

***NEVER fill machine higher than 2 inches below the light & ALWAYS keep the barrel covered!***

**For Floor-Model Stainless Steel Machines**

**Pour until the color fill indicator (short plastic tube on top of the machine) completely fills the tube**

- Re-cover the machine

***Note:*** Room temperature product will take approximately 1 1/2 hours to freeze to a slushy consistency (refrigerating product will reduce this time)

***Any unused mixed product MUST BE REFRIGERATED!***
